Font Substitution

List of fonts supported by IP.com's publishing system

By IP.com

The IP.com publication process will generate a PDF representation of your primary document whenever you select either the "Without Authorship" option or the "PDF Rendering" option. In order to preserve accuracy in rendering to PDF, the rendering software must have access to all the fonts used within your document.

The fonts supported by the IP.com publication process are listed below. If your document contains fonts not listed on this page, you will receive an error via email after publishing, requesting that you either choose supported fonts or select different publishing options.
